Who We Are

It gives me great pleasure to introduce the Pro-Veg Seeds catalogue for 2022/23.

Firstly, I would like to thank you all for your continued support and the business you have placed with us during 2020 and 2021. This is greatly appreciated by the whole team at Pro-Veg Seeds.

2021 will be remembered for the continued restrictions endured by us all effecting our lives and businesses because of the covid epidemic. It will also be remembered for the sad loss of John Burrows, the owner and driving force of Pro-Veg Seeds for so many years.

Despite these challenges Pro-Veg Seeds have continued to work hard on variety testing and development, maintaining our close links with breeders and associated partners from around the world.

Throughout this catalogue you will see some of the results of this work, as we introduce several new varieties to you our customers for the first time. Even more exciting will be some of the material that we will be able to show you over the coming years.

Pro-Veg seeds have also maintained its own breeding work with the continuation of the highly successful Patio Tomato program and the start of a new legume breeding project.

Service has always been key within Pro-Veg Seeds and I would

like to thank Barrie, Julia and Brian for their continued hard work and professionalism over the last two years. In this modern world a fantastic team is not always enough, so earlier this year the decision was made that Pro-Veg Seeds needed a new Home. We moved offices at the turn of the year and developed improved and greater seed storage facilities allowing us to hold higher levels of inventory in the future.

Work is ongoing with our new web site and the target launch date of the 1st of December 2021 looks achievable, we certainly hope this will improve efficiencies and give you more information about our products.

Our open days in August and September have been expanded over the last two years due to their popularity, and in 2021 our visitors will have had the choice of 9 days to look at, over 300 varieties being demonstrated. These visitors will also have had a chance to visit our newly built 3 zone Glasshouse giving us modern facilities for propagation, testing, and breeding in the future

Once again, I would like to thank you for trusting Pro-Veg Seeds with your seed requirements over the last two years and look forward to working with you all during 2022.

Globo

Vsetana

Karminka

Karmen

Isobel Rose

Allium

Spring Sown Bulb Onion

Globo - Yellow

An early, mid-season variety of mild onion with excellent flavour. Produces very large bulbs especially from early sowings in modules. Not suitable for long term storage.

Lusy - Yellow

An early variety, with mid-sized bulbs and a thin neck, bulbs are very uniform. Suitable for mid-term storage.

Vsetana - Yellow

A mid early variety with hard firm bulbs, with good skin quality. Bulb size 50 to 70 mm. Suitable for medium storage.

Elista - Yellow

An early onion variety with attractive elliptic shape, a nice dark skin and good storability. Dry matter content 13%.

Karminka - Red S

Flista

Karminka is a red version of our elliptical shaped variety Elista. The variety is a LLD early maturing onion. It is suitable for long term storage.

Karmen - Red

Suitable for growing from sets as well as from seed. Flesh is white with good crimson red circles. Very good internal colour and an excellent shelf life.

Isobel Rose - Pink

This variety is a Pink Long Long Day (LLD) Rijnsburger type bulb onion, adaptable to a range of growing situations with a high level of uniformity and good yield potential. The bulbs have a pink internal and external colour.

Albienka - White

A mid-season white variety, with mid-sized bulbs and a thin neck, bulbs are very uniform. Suitable for mid-term storage.

White Star F1 - white

A hybrid intermediate day white fleshed bulb onion producing mild tasting large to jumbo sized bulbs. It has a high tolerance to white rot. [HR: Sc.].

Aeneus F1 - yellow S

A mid early hybrid, with a strong root system and upright foliage. Bulbs are uniform with a thick bronze skin and thin necks. It is tolerant to dry conditions and some tolerance to mildew. Suitable for mid term storage. [IR: Pd.].

Klaria - brown/vellow

A mid early variety, producing high yields of round bulbs with a brown to yellow skin. Foliage is very erect and has a high tolerance to mildew. [IR: Pd.].

Overwinter Bulb Onion

Augusta - Yellow

A mid-late overwintering onion. Bulbs are yellow medium sized. We recommend later sowings because of the varieties tolerance to cold weather. Augusta is suited to both bunching onions and fresh bulb production.

Hiberna - Yellow

A late high yielding overwintering variety. Bulbs are large and yellow brown to bronze skinned. Hiberna is suited to both bunching onions, fresh and dried bulb production.

Red Moon - Red

A short day overwinter onion, with slightly elongated bulbs. Skins are good and the flesh has a good red colour throughout its bulb. Maturing at the end of May and into June.

Winteria - yellow S

A mid-early overwintering onion. The bulbs are uniform, globe shaped with a firm yellow skin. This variety has good winter hardiness and is tolerant to bolting. Suitable for medium term storage.

6 Root Crops

7ebrune Simiane

White Star F1 Bunching 81 F1

Lilia Odrin

Shallot - Eschallion Zebrune

Heritage variety, otherwise known as 'Cuisse de poulet du Poitou'. The gourmet's choice. 'Torpedo' type shallot with brownish pink skins.

Figaro

Eschallion Shallot 'Figaro' produces attractive, shiny, copperbrown skinned elongated bulbs, with crisp white flesh and a very distinct flavour.

Simiane - Pink / Red

Is a variety of 'Long de Florence' onion, and is suitable for both high and low density production, depending for which market it is being produced.

PV 001/16 - red

Is a new eschallion shallot variety, producing elongated bulbs with a red skin. Suitable for medium term storage.

Salad Onion - Continental White Star F1 S

An early maturing white hybrid onion, which produces continental sized salad bulbs. Highly resistant to Pink Root, with an excellent white colour. Storage capability is medium to long if grown for larger dried bulbs.

Salad Onion - Bunching Bunching 81 F1 S

An Allium cepa x Allium fistilosum white bunching onion. It is high yielding, with dark bluish green leaves which stand up perfectly straight due to their robust root systems.

Lilia THS

Attractive red coloured salad type with good uniformity and milder flavour making it a very appealing and colourful bunching type. Can also be used as a continental salad onion.

Slender Star 🕞

Very straight Allium fistulosum variety with little bulbing, dark green leaves and good tight leaf attachment. Slender Star is very suitable for fresh market and pre-pack segments, and can successfully be used on higher density for mini salad onion production.

Gerda

A very early bunching onion with good flavour and strong dark erect foliage. Suited to Spring, Summer, Autumn, and Overwintering production. Quite vigorous in cold weather. Excellent quality for cutting and bunching.

Scarlet Bandit

Is an heirloom Allium cepa bunching variety. Foliage is semiupright with slender bulbs with a scarlet red hue with flecks of white

Espada Verde S

A heat tolerant early bunching variety, with erect dark green foliage which is easy to strip. It has 8 to 10 cm white shanks. [HR: Pt.].

Natsuvo Verde S

An early Allium fistulosum bunching variety with erect, dark green foliage and 8 to 10 cm white shanks. [HR: Pd, Pt, St, Thrips,].

Leek Gladius F1

Gladius F1 is the result of a new breeding programme and can be grown for harvesting from early Autumn through to Spring. It is a blue green winter type with a long shaft, no bulbing and the foliage strips easily at harvest.

Odrin

A winter variety with superior cold tolerance. It has a strong root system and grows quickly in cold temperatures. In the spring this variety is very quick to regrow. Odrin is very tolerant to bolting and lodging.

Root Crops 7 Tel: +44-(0)1223 499130

Jarana F1

Purple Dragon

Rondo

Oxheart

Bielas

Carrot

Nantes

All Seasons

An heirloom variety with a very strong foliage and producing high quality, 20 cm long, uniform, tapered roots with an orange colour and slightly reddish skins.

Darcy

A fresh market, Nantes type carrot, with good cylindrical shape. Producing a strong foliage with good attachment. Roots are uniform in shape, stumped, and bright orange. Root dimensions are approximately 17-20 cm long x 4 cm wide.

Marquette

Produces very uniform, smooth skinned 18-22 cm long roots, with an intense internal and external orange colour. Especially suited for the fresh market.

Jarana F1

A Nantes hybrid which produces 18-22 cm long, uniform roots with smooth skin and intense orange colour. Foliage is short and extremely healthy. An excellent variety for bunching use.

Purple Dragon - Purple S

Originally bred by Dr. John Navazio from a Kuroda x Chantenay. Foliage is vigorous and strong. The 13-18 cm long roots, have reddish-purple skins, that make an amazing contrast with the orange/yellow flesh when sliced. This selection has a wonderfully sweet, almost spicy, true carrot flavour.

Chantenay

Chamare S

Chamare

A mid-early Chantenay variety, with strong foliage. Roots are smooth skinned with good colour. Suitable for fresh market and juice production.

Berlicum

Koloseum F1

New Berlicum type, with high yields and firm foliage. Roots have good internal and external colour and have high dry matter content. Suited to canning and freezing industries. Average root length 20-24 cm.

Jikta F1

A mid-late Berlicum type, producing high yields of uniformly shaped 18-22 cm long roots. Maturity: 135 days. The variety can also be used for an early bunching type after 100 days.

Paris Market Pariska Special

A speciality for processing. The spherical, smooth roots have virtually no shoulder. Quick to mature with excellent flavour. This selection has scored the highest points in Swiss and Dutch national trials.

Rondo

A very early Parisian type with an excellent round shape. Flavour of the roots are very sweet.

Heirloom

Jaune du Doubs

An heirloom selection with thin tapered yellow roots. Delicious flavour and it keeps well.

Oxheart

Heritage variety from 1884. Short, thick roots that are an unusual ox-heart shape. The roots should be harvested whilst they are quite young, otherwise they will grow to be too large.

Parsnip

Bielas

Bielas has moderate vigour foliage and long smooth roots. Suitable for processing or fresh market, as well as long term storage.

8 Root Crops

Neon Japana F1

Panter Blue Moon F1

Ruby Yeol F1

Vodka

Celeriac

Neon

An early variety, with good yield potential. Roots are smooth without cavities. Flesh is white and does not contain anthocyanin, it remains white after cooking. Suited for fresh market storage and also drying.

Maxim

A high yielding late variety, producing smooth large bulbs, its high yield and dry matter content make the variety well suited to industry production.

Radish

Oriental Types

Japana F1

An early variety best suited to summer sowings. Cylindrical in shape with very smooth roots with a blunt end. Skins and flesh are white.

Panter

An early variety, best suited to summer sowings, but it can also be used in the spring. The variety is both uniform in shape and its maturity. Roots are round and have a black skin with white flesh.

Karmina

Similar in maturity to Jantar, it is best suited for spring sowings, but can be used in the summer as well. Roots are pointed and have red skins with white flesh.

Jantar

Slightly later than Japana F1, best suited for spring sowings, but can be used in the summer period. Shorter and more pointed than Japana F1, its skin colour is yellow and flesh is white.

Blue Moon F1

A unique radish variety with purple blueish skins and flesh. The 25 cm cylindrical roots have a crisp texture and a refreshing, mild flavour, that makes a great addition to stir fries. Also sliced roots are delicious and make an attractive addition to mixed salads.

Red King F1

An autumn radish with excellent red-coloured smooth skins and white flesh. Average root length is 20-25 cm. Planting distance can influence root size.

Ruby King F1

A unique high yielding, widely adaptable variety, producing green leaves with a red petiole. Its roots are an attractive red colour with a sweet flavour. Sliced roots make a superb addition to mixed salads.

Redmoon F1

Unique for its attractive red skin and rose-pink flesh. This colourful radish has an appealing conical shape, with a mild and refreshing flavour. Perfect for enhancing stir fries with its crisp texture, and visually stunning when sliced into salads.

Ruby Yeol F1

An edible leafed radish variety. Foliage is upright, with long purple stems containing anthocyanin. Its foliage is excellent when chopped in salads and it has an even deeper colour when pickled.

Dragon F1 S

This red skinned Chinese radish has excellent skin quality with very few root hairs. Will grow up to 15 cm long, we recommend that it is at its best in the UK climate. Around 10 cm long, it is in between a salad radish and Mooli type in texture. Excellent flavour used fresh or in stir fries. Different and unusual.

Vodka

Vodka is an ice candle type. It has short leaves and produces milky white coloured 15-20 cm long roots with smooth skins, without any lateral hairs. It has a medium early growth cycle, sowing February to April and harvesting April to November. Row spacing should be 10-15 cm with a plant spacing of 3-5 cm.

Tel: +44-(0)1223 499130 Root Crops 9

Primara F1

Vinara F1

Malaga Viola

Teko Slavia

Round Types

An extremely early hybrid, producing uniform round, shiny red roots. Foliage is short but strong, an important factor for bunching. The variety is suited to indoor cultivation and outdoor in both spring and summer sowings.

Primara F1

Vinara F1

A very early hybrid, producing uniform round, shiny red roots, Foliage is short but strong, an important factor for bunching. The variety is tolerant to poor conditions and is suited to indoor cultivation and outdoor in spring and to a lesser extent for summer sowings.

and in open field production. Roots are round, dark red, 2-3 cm diameter with a high level of uniformity. This variety has

excellent resistance to bolting.

Teko 🕞

A very early white variety with round 2-3 cm roots. Recommended for early plastic tunnel or open field production. Ideal for bunching with a good length and an attractive leaf.

A very early variety and excellent for forcing under cover

Pink Beauty RHS

A lovely, round, pink-skinned radish 2-3 cm diameter with a mild tasting, white flesh and a crispy, firm texture. Excellent for 'Easter Egg' blends.

Malaga

A guick and easy-to-grow radish, roots are round with a striking purple skin and crisp, white, slightly spicy flesh. The younger leaves of this radish are tender enough to add to any salad.

Viola

A slower growing selection for outdoor cropping. Roots are round, bright violet and large with white flesh. Good resistance to bolting and splitting. 36-40 days sowing to maturity. Excellent for 'Easter Egg' blends.

Bacchus F1

A vivid purple skin with crisp white interior flesh. Maturing in approximately 25 days, this variety is perfect for successional sowing at four-week intervals, throughout the season. In the spring it has a strong radish flavour that gets hotter in high summer.

Lilana 🕞

A new early maturing violet coloured radish, with shiny white crisp flesh. It is tall and strong and producing 2-3 cm diameter roots that have a fine flavour. Roots tolerant to cracking and it is a good early variety for use in spring and autumn production.

French Breakfast

Slavia

Very early maturing variety which produces 3.5-4 cm long, bright red cylindrical-shaped roots with white tips. Recommended for spring to early summer harvests.

Heirloom

Red Head

Pretty looking heirloom radish with a short top, suitable for bunching. Mild white flesh and a characteristic red blush on the skin.

10 Root Crops

Red Atlas

Chioggia

Golden Globe Golden Boy

Temari White F1

Silky White F1

Beetroot

Standard

Detroit 7 - Bitonto

Adaptable variety, suitable for early and late sowings. Particularly well-suited to Baby Beet production.

Red River F1

Mid to late variety that is very uniform with a small crown. Particularly good for production of 50 / 90 mm bulbs that store well and have an intense colour.

Red Titan F1

Maturing in approximately 60 days, Red Titan is an extremely high yielding, uniform variety, producing dark red roots with a high sugar content of 12-15%

Red Atlas

Maturing in approximately 55 days, Red Atlas is a high-yielding variety, producing dark red, very uniform roots, with a high sugar content of 12 - 15%.

SpecialityWhite Ghost

This speciality beet has large ice-white globe shaped roots with relatively thick skin and green wavy curled tops that make nice beet greens. Flesh is white and sweet with a potato like texture.

Chioggia

Globe-shaped roots with a pale red skin and very attractive pale inside colour with red rings in cross section.

Golden Globe S

An improved orange selection, with good uniform colour and shape. A mild tasting variety that can be grown throughout the summer from successional sowings. Providing continuity of supply for the fresh market.

Golden Boy S

Golden Boy is a stunning golden-orange fleshed beet with bright green leaves, a uniform globe shape and refined taproot. The attachments are strong and stand upright creating an attractive bunched product.

Karkulka 🕃

Producing cylindrical shaped roots with dark red flesh and smooth skin. Karkulka has excellent flavour. Perfect variety for fresh market and storage, it is also suitable for all type of processing including slicing, pickling or production of chips. It is sensitive to cold weather and therefore we recommend a late spring sowing to avoid possible problems with bolting.

Turnip

Temari Red F1

Is an all-season Japanese type salad turnip. Producing a tender and mild root with scarlet coloured skins with white flesh, slightly tinged with red.

Temari White F1

Is an early-maturing, all-season Japanese type salad turnip. It has upright foliage and a tender and mild semi-globe white root.

Silky White F1

A white salad turnip, 7-8 cm in diameter, Flesh has silky delicate texture with a smooth sweet flavour.

12 Legumes PRO-VEG SEEDS CATALOGUE 2022 / 23

Mucio

Vivado Twinset

Saltingo

Eldorado

Pea

Garden Pea

Prelado

The earliest first early variety (-2 Avola) with excellent quality. Standard leaf type very well suited to a range of conditions. A double-podded variety with an average of 7 peas per pod.

Bingo

Avola

Standard first early variety (58 UK days) with excellent quality. Standard leaf type suited to a range of conditions. One or two pods per node and 5-6 peas per pod.

Bingo

An early maincrop variety with a vigorous semi-leafless plant type, well-suited to late cropping, where it does not re-flower and finishes well. Predominantly two dark green pods per node, containing 8-9 peas per pod. [IR: Fs. Ep].

Mucio

Mucio is a standard leaf early maincrop variety with excellent stress tolerance. The strong root system make it well adapted to the main growing season, it is a natural replacement for Onward or Early Onward. Compact growing and long pods make it very easy to pick and its high ovule count give it an excellent shell out percentage. [HR: Ep].

Vivado

Vivado is a late-maturing pea which has an exceptional disease resistance package which reduces spraying costs and risks due to tougher EU regulations. It produces 8-9 high quality peas in uniform and consistent 9.5 cm length pods. [HR: Pv, Ep, FS 1 + IR: PEMV].

Ambassador

Is a standard leafed late variety. It produces large blunt ended pods containing dark green peas. Ambassador is the fresh market industry standard. [HR: Ep, Fop].

Twinset

Is a standard leafed late variety. It produces large pods containing dark green peas. [HR: Ep, Fop].

Johan

This variety is a stable, high yielding late-maturing, double-podded variety. Excellent quality healthy plants with good disease resistance. Pod length is approximately 9 cm, with 8-10 peas per pod. Ideally suited for both fresh market hand picking and for home garden use. [HR: Fop. Ep, PSbMV].

Utrillo

Maturity as Avola + 14 days, this variety is a stable, high yielding late maturing, double podded variety. Producing excellent quality healthy plants with good disease resistance package. Pod length is approximately 9 cm, with 8-10 peas per pod. This variety is ideally suited for both fresh market hand picking and for home gardeners use. [HR: Fop. Ep, PSbMV].

Ruselago

Fasciated Semi-Leafless type pea with the pod load at the top and is a high yielder. [HR: Pv, IR: Ep, PEMV, Fop1.].

Saltingo

A new second-early introduction, maturing 4-5 days later than Avola. The variety is semi-leafless with excellent standing ability. [HR: Pv, Fop 1. IR: Ep, PEMV.].

Alderman

Is a well known maincrop heritage variety, producing heavy crops of large, curved, dark green pea pods containing up to 11 peas with a superb flavour.

Meteor

Producing a well-filled pod, it is an excellent choice for growing in containers on the patio.

Eldorado

A first-early variety (Avola - 2 days) producing dark green peas with a medium to large sieve size. [HR: Pv, Fop].

Tel: +44-(0)1223 499130 Legumes **13**

Tom Thumb

Snow Green

Snow Max

Sugar Sprint

SS 141

Garden Pea - Dwarf

Tom Thumb S

Tom Thumb is a dwarf garden pea variety which is ideally suited for patio production or container gardening. This frost hardy variety can be grown with minimal support, to give a good crop of sweet and tasty peas from a range of sowing dates, throughout the growing season. [IR: Pv].

Snow Pea

Snow Green

Plants are 75-80 cm tall, indeterminate with a standard leaf type. The flat edible pods are \pm 9 cm long, straight, blunt and fleshy with particularly slow seed development. Good heat tolerance. Snow Green is easy to pick with very low string levels and produces extra-sweet peas when fully mature.

Snow Wind RHS

Plants are 75-80 cm tall, indeterminate with a semi-leafless plant type, with good heat tolerance and slow seed development. The easy picking flat edible pods are \pm 9 cm long, straight and blunt ended. Snow Wind has a very low string level and produces extra-sweet peas when fully mature.

Snow Max

Afila variety with a semi-leafless bush type and concentrated pod set. Produces straight, smooth, high-quality pods; strong retail and consumer appeal

Snap Pea

Snow Wind

Sugar Sprint

Sugar Sprint is a standard leaf, first early 61 days variety. It is currently the only early stringless type, has mid green 7.5 cm pods / 2 per node. Plant height is 55-60 cm. [HR: Ep, FS].

Sugar Heart

Sugar Heart is a determinate (60 cm) standard leaf, early maincrop. The pods have stringless, mid-dark green 8 cm pods with 2 per node. Ideally suited to the UK market. Plant is vigorous. [HR: Ep].

Sugar Lace This

Sugar Lace is a sweet fleshy, round podded, stringless sugar snap variety, suitable for fresh market and freezing. The plants are semi-leafless with medium vigour and 65 cm tall. The pods are 7 cm long, medium dark green in colour, straight and blunt ended. [HR: Ep, Fs 1 + IR: BLRV].

Purple Magnolia S

The first purple podded sugar snap pea which is the result of over 15 years of work by Dr. Alan Kapuler PhD, who is based in Corvallis, Oregon, USA. Maturing in 100 days, with sturdy 150-180 cm foliage, its unique hyper-tendrils securely hold on to any supports. An excellent addition to salads.

Spring Blush S

Is also bred by Dr. Alan Kapuler PhD, this variety is a real showstopper, two-tone snap pea. It has the bi-coloured flowers and unique hyper-tendrils. The sturdy plants are very productive and the taste is great, this variety is sure to become a classic.

Green Magnolia

Is an innovative climbing, hyper-tendril snap pea bred by Dr. Alan Kapuler PhD. Vines produce bi-colour flowers and large pods. Flavour peaks just before the string turns red.

SS 141

Is a jumbo sized stringless sugar snap pea, with 10 cm long plump pods. Peas have an excellent flavour. [HR: Fs, Fop.].

French Bean

Dwarf French Bean - Early

Jazz

Jazz is an early fresh market round podded variety in the 9-10.5 mm size grade. Pods are very dark glossy green in colour and 14-15 cm long and easy to pick. [HR: BCMV, CI, Psp].

Baritone

An early fresh market or processing round podded variety in the 9-10.5 mm size grade. Pods are very dark green in colour and 14 cm long and easy to pick. [HR: BCMV, CI, Psp].

Tempo

An early 55 day fresh market or processing, round podded variety, in the 9-10.5 mm size grade. Pods are medium green in colour and 12 cm long and easy to pick. [HR: BCMV, Psp].

Saba

Saba is an early 64 day fresh market or processing round podded variety in the 8-10.5 mm size grade. Pods are medium green in colour and 13-14 cm long and easy to pick. [HR: BCMV, CI, Psp].

Mobile

An early round podded variety in the 9-10 mm size grade. Pods are very dark green in colour and 14-15 cm in length.

Dwarf French Bean - Very Fine

Jameson

A very fine podded variety with high yield, good stability and lodging tolerance. Mid Early, 61 days. [HR: BCMV, CI 1, Psp 1-2.].

Kamaron

A very fine podded variety with high yield, good stability and lodging tolerance. Mid Early, 60 days. [HR: BCMV, Cl 1, Psp 1-2.].

Kapron

Extra to very fine grading variety with nice green uniform pods.

Dwarf French Bean - Fine

Caledonia

A medium early, very fine dwarf bean variety. Producing a high pod to plant ratio that is well suited to mechanical harvesting. Pods are straight, smooth skinned and dark green, 12 cm long and 6.5-8 mm in diameter. [HR: BCMV, Anthracnose and Halo blight. IR: Rust].

Elba

This new variety has shown very good results in several trials. It is a medium early, very fine variety, pods are round, dark green, smooth skinned and straight. Pods are 12 cm long and have a diameter of 6.5-6.8 mm. Elba is suitable for fresh market, prepack and processing. [HR: BCMV, CI IR: PsP, Ua].

Desperado

A vigorous growing variety producing high yields of brown seeded straight pods, 13-14 cm in length. Well adapted for heat and stress tolerance. [HR: BCMV.].

Momentum

An upright bush style variety, Momentum produces concentrated sets of straight pods and is widely adapted to most growing regions. [HR: BCMV.].

Escadron

Fine to mid-large variety with good grading and pod setting, resulting in a good homogeneous crop. [HR: BCMV, CI 1, Psp 1-2.].

Celine

The first purple-wax bean. With a plant height of 45 cm high, Producing round, straight, tender, stringless purple-wax pods, 10.7 to 11.5 cm long and 8 to 10 mm dia. (85%-3 sieve).

Seychelles

Witkiem Manita

Statissa Robin Hood

Green Shell

Summer Shell

Climbing French Bean

Sevchelles

An early pole bean with a medium plant vigour. Suitable for glasshouse and outdoor production. Producing 8-9 mm x 12-13 cm dark green round straight pods. [HR: BCMV, CI].

Runner Bean

Emergo Stringless

Maturity: 87 days. Emergo is a white seeded, white flowering runner bean which is easy to grow. It produces 2 cm diameter x 30 cm long stringless beans over a long harvest period.

White Emergo

A vigorous white flowering variety, with pods measuring 25-28 cm.

Enorma

A vigorous purple flowering variety, with pods measuring 30-32 cm.

Broad Bean

Broad Bean - Standard

Luz de Otono

Early to mature from an autumn sowing this variety has short day tolerance. Pods are 24-26 cm long and 3 cm wide with 5-7 beans per pod. Double pods at first node. Attractive seeds of very good flavour.

Strong Witkiem type with very early maturity and short wellfilled pods with 4-5 beans. Pale seeded.

Statissa P S

A coloured flower variety, with good vigour and high yield. Statissa has a small sieve size with an excellent bean to pod ratio of 45%. It also has a strong flavour and is easy to grow and pick, making this a variety for the connoisseur. The variety can also be used as 'mange tout' production.

Janet

A small seed variety popular in New Zealand. High yielding, beans are greyish in colour with good flavour and texture

Broad Bean - Dwarf

A very dwarf variety, with green pods and beans. Robin Hood is an improvement on the variety 'The Sutton'. It is suitable for use in smaller gardens, containers and pots.

Edamame

Green Shell S

Green Shell produces large, dark green pods with a white pubescence and mostly 3 seeds set per pod. Plants grow to around 50-60 cm in height.

Summer Shell (S)

Hokkai Green

A compact variety that is well suited for shorter season colder climates. The plants are erect and reach about 60 cm in height. The pods will become thicker in just a few days before they are ready to pick. Producing deep green hairy pods with black seeds.

Komodo F1

Orion F1

Blue Finn F1 lacaranda

Atlantis F1

Apollo F1

Broccoli

Calabrese

Komodo F1

green dome shaped heads. [IR: Pb, Foa].

Orion F1 S

Maturity: 60-65 days from transplanting. Producing medium sized plants with small to medium sized green dome shaped heads and few side shoots.

Besty F1

Produces a dark green, solid, domed head at maturity. Recommended for growing in spring, summer and autumn. It is suitable both for the fresh market and processing.

Griffin F1

A variety producing a close-beaded, 8-20 cm bluish-green central head, which once cut, then produces abundant side shoots. Griffin F1 is a large broccoli suitable for both market and home garden.

PV 1819 F1

A variety that produces a good green dome shaped head even under heat. The head can weigh between 300-500g and any side shoots can be harvested. [HR: Xcc, Abe].

Blue Finn F1

Vigorous plant, with large domed heads and a good blue green colour. Average head weight 500g. It also produces some good quality secondary shoots.

Jacaranda

An early variety, Jacaranda is a cross between broccoli and cauliflower. It has blue green foliage and purple curds that have a mildly sweet flavour.

Brokali

Atlantis F1 S

A Spring / Summer maturing stem broccoli, harvesting in 60-90 days, with many side shoots that are tender and tasty. Keep cutting for high yields.

Apollo F1

A Summer / Autumn stem broccoli, harvesting in 60-90 days after sowing and then the side shoots can be harvested over a long period. To get a larger number of side shoots, plant with more space between plants than normal broccoli and cut the main head to encourage branching. The stem is easy to eat, very tender and tasty.

Endeavour F1

A stem broccoli variety for later planting. Endeavour has a similar flavour to Apollo and Atlantis, it also has a distinctive and tasty savoyed leaf. In our late planted trials in the UK, Endeavour overwintered successfully, producing stems in February.

Spigariello Rifiorente S

Leafy cool-season green that tastes like broccoli and keeps on growing after harvesting the main shoot. It has white flowers and a sweeter, slightly more peppery taste. Grown for the edible small, narrow and indented immature leaves not the florets. Sow July to December for harvest from December to March.

Spigariello Riccio S

Details same as 'Spigariello Rifiorente. Sow March to August for harvest from November to March.

Tenderette F1

A unique stem broccoli, much earlier, more refined and sweeter tasting than anything else in this segment. Sending out multiple 7-10 cm stems.

Columbia F1

Is cross between Broccoli and Chinese Kale. Harvest the main head at 5 cm diameter and then side shoots follow to be cut at 12-18 cm in length.

Crispus F1

Maximus F1

Redarling F1 Cordese F1

Minica F1

Kalibos

Brussels Sprouts

Clodius F1

A late variety, with long standing ability. Producing mild tasting smooth sprouts.

Crispus F1

A mid-early variety producing mild tasting, smooth, good quality buttons with a small butt. Crispus is a club root resistant version of Maximus. [HR: Pb.].

Maximus F1

A mid-early variety producing mild tasting, smooth, good quality buttons with a small butt.

Redarling

Redarling is a red coloured sprout with a mild and nutty taste experience. It can be used for fresh or processing. Transplanting times are recommended to be from the end of April and May, ready for harvest during December and early January.

Cabbage

Green

Kilastor

High yielding 2.5 to 4.0kg sized cabbage. Excellent internal structure and uniformity. Suitable for long term storage. [HR: Pb.].

Savoy

Cordese F1

A nice compact, heavy, dark green, savoyed cabbage, for harvesting late. Summer to mid Autumn maturity. Easy to cut and pack. [HR: Pb. IR: Ac, Mb.].

Nebraska F1

A winter hardy savoy, for harvesting November through to February.

Attractum F1

Fast growing savoy (60-65 days from planting), heavy heads and good field standing for summer production.

White

Forza F1

A late maincrop variety maturing 135 days from transplanting. Forza F1 is a large headed white cabbage suited to processing after storage. Suited to long term storage through to early July.

Minica F1

A very early mini cabbage, suitable for high density planting. Heads are 0.5–1kg in weight. Tolerant to cracking.

Red

Reball F1

An early, round red cabbage hybrid for the fresh market. Heads are an average of 1-2kg in weight. Harvesting can be from 55 days after transplanting depending on head weight required. Good for long term storage. [HR: Ac, Xcc.].

Mars

An early variety, dark purple in colour with a flat round shape, weighing approximately 1.5kg.

Pointed Red

Kalibos

A pointed cabbage with red colouration. Good for producing a mini head when grown at higher planting densities.

Pointed Green

Dutchman F1

Is a compact growing 500g hybrid variety producing prepacking quality sweetheart cabbages. It has an exceptionally mild, sweet flavour. Its narrow base makes it well adapted to producing baby pointed heads when grown at high densities.

Monarchy F1

Is a slower growing 500g hybrid variety which is used to extend the growing season into the Autumn months. It has an exceptionally mild, sweet flavour. Its' narrow base makes it well adapted to producing baby pointed heads when grown at high densities.

Spring Greens

Summerjewel F1

Is a spring cabbage type which can be grown for both summer and autumn production. It produces very compact 250g heads suitable for pre-packing use.

Sweetie F1

Andromeda F1

Fioretto F1 Grafitti F1

Clementine

Crimson Garden

Winterjewel F1

An overwintering spring cabbage type which can be grown for January to February harvest. It is very compact and slow to heart. It produces very compact 250g heads.

Collards

Sweetie F1

Sweetie is a collard-kale with a unique sweet flavour. Originally selected for juicing, this hybrid maintains a particularly sweet flavour, especially when cooler growing conditions can improve the Brix up to 17%.

Cauliflower

Andromeda F1

Excellent example of a 'White Curd' cauliflower, staying brilliant white in the sun and it does not turn yellow at maturity. This is one of the best new summer and autumn cauliflowers on the market.

Depurple F1

A highly distinctive looking, new purple cauliflower, with deep intense purple colouring, producing high quality curds and with a good shelf-life.

Almagro

Almagro is a reliable cauliflower with excellent vigour producing a firm white curd with good protection. 90 growing days, suitable for harvest from July until August.

Fioretto F1

Fioretto the Itallian word for 'flowerettes', is a newly developed cauliflower, producing long stems. The long slender, bright green stems are very even in length. With white caps on the end of each stem, give it an appearance of a flower bouquet. It has a sweet taste when eaten fresh or cooked.

Clapton F1

A Summer and Autumn variety with club root resistance. [HR: Pb].

Grafitti F1 TRHS

Is a novel variety with naturally occurring deep violet-purple coloured curds. Delicious as a raw crudité, stir-fried or steamed.

Raleigh F1

A Summer and Autumn variety producing heavy white curds, with strong tolerance to pink curd.

Clementine

It is a Summer and Autumn harvest, medium-sized cauliflower, with high yields of smooth, dense, orange coloured well-shaped heads.

Kale

Red Monarch F1 S

Is an improved hybrid version of Red Russian and can be cropped in the summer or overwintered. Its' reddish purple leaves make the variety suited to both whole head growing and baby leaf production.

Red Tatanka F1

A dark green hybrid borecole kale. It produces high quality thick, curly, dark blue-green leaves. It has very good standing ability and winter hardiness.

Red Kale F1 S

Early maturing, hybrid kale with red serrated leaves on top with green undersides. The intense dark red colour is maintained in high temperatures. Highly productive, producing juicy and crunchy leaves. Well suited for whole head packing and salads.

Red Mizuna F1

Has smooth leaves that are red-purple, multi-branched, and have serrated edges with a fringed appearance. Some selections have green undersides and dark purple veins.

Crimson Garden

A Summer and Autumn colourful kale variety, producing vibrant pink to red fan-shaped leaves with highly frilled edges. Used as a garnish or to brighten any salad mix. Leaf colour is enhanced by cooler growing conditions

Moravia

Modrava F1

Miniko Amaze

Cervanek

Red Tango

Ivory Garden

A Summer and Autumn maturity, this snowy white centered dwarf growing kale variety, offers a contrast to Crimson Garden. It has the same growth habit, average height and leaf characteristics.

Kohl Rabi

Early production

Moravia

An early white variety, with a flattened round shape. It should be grown at 25 x 25 cm plant spacing.

Modrava F1

A very early variety for spring and autumn field production. It has a medium sized flat round bulb with high quality flesh. It is tolerant to bulb lignification and cracking and produces uniform bulb development in poor conditions. Ideal density 25 x 30 cm plant spacing.

Lettuce

Iceberg

Miniko

A mini iceberg type, producing heads between 280g and 350g. Its attractive heads are well adapted for growing in spring, summer and autumn.

Romaine

Garnet Rose S

A new dark red romaine lettuce with a tall upright plant type. It has excellent uniformity, producing savoyed leaves that are well suited for baby-leaf production.

Outredgeous S

Dark red romaine lettuce, producing large loose heads at maturity. Maintains dark colour under low-light conditions. Use for cutting at 30 days from transplanting. Excellent for baby-leaf production.

Red Gem

Amaze 🔻 😒

A red Little Gem with excellent uniformity and impressive colour; it produces plants with glossy, maroon-red external leaves and an attractive yellow interior; the leaves have a soft, buttery texture and have no red speckling as other red Little Gems. Bremia resistance. [BL1-16,19,21,23].

Green Gem

Actina

High quality uniform romaine lettuce, with excellent tipburn tolerance in the summer. Torpedo shaped.

Winter Density

A romaine lettuce for all seasons! Tightly folded, dark green heads sit high on the stem for good airflow. Texture is a cross between butterhead and romaine with good flavor all season.

Butterhead

Matina Sweet

A small to medium size butterhead type, with dark glossy leaves, that form a very nice semi-tight head. The interior is a creamy white and has a sweet butterhead taste. The heads are slow to bolt and are heat tolerant. Suited to greenhouse and outdoor production.

Cervanek

A red butterhead selection with good bolt resistance suited to cropping throughout the outdoor season. The 360g heads have a slightly blistered leaf. [BL: 1,3,12,13,17,18,21-25.].

Citrin

Citrin is an early butterhead lettuce bred for early sowing in heated and unheated glasshouse and tunnels. Producing 220g heads with an attractive matt green colour. Good disease resistance. [BL: 1-25].

Red Oakleaf

Rubillite

An oakleaf variety with good dark, wine-red coloured leaves with attractive round lobes with a good flavour. It has a good colour even at young leaf stage, making it suitable both for baby-leaf and whole head production. [HR: BL16-32].

Red Tango

Produces uniform, voluminous plants, with deeply lobed leaves with curled margins and narrow stems. [HR: 16-21,23-26,28-32].

Karminova

7latava

Sweet Success

Rhubarb Chard

Rainbow Chard

Bright Yellow

Dubared

An early maturing red oakleaf lettuce. Slow to bolt and ideal for baby leaf. Suited to cropping through the season.

Bronze Beauty

A great loose-leaf variety, sweet flavour, excellent for salads and garnishes. Maturity 40-50 days from transplanting.

Lollo Rossa

Karminova

Is suitable for early spring, summer and autumn cropping, with dark red leaves which produces attractive 350g sized heads. Also suited to baby leaf production.

Lollo Bionda

Zlatava

Is suitable for early spring, summer and autumn cropping, with attractive yellow-green leaves which produces attractive 380g sized heads. Also suited to baby leaf production.

Cosberg

Sweet Success

Sweet Success is a speciality lettuce with a plant habit similar to that of Romaine and the crispness of head lettuce. It produces medium tall, heavy plants that are a glossy, deep green colour. The leaves have a thick, crisp texture, serrated margins and a tendency to cup in. [Bl: 1-20,22-28].

Spinach

Montego

Is a slow growing type perfectly suited for summer production, giving high yields with outstanding leaf texture and shape. [Pfs: 1-9,11,16].

Mustard

Green Wave

Is an oriental salad leaf with dark green leaves, which are serrated at the ends. slow to bolt, 40-45 cm tall with a spicy flavour.

Swiss Chard

Green Wave

Green Wave produces dark green leaves with a green veins and a green slender mid rib. It is ideal both for the bunching market and processing.

Rhubarb Chard

Attractive, red stalks and small green leaf with red veins, ideal for salads. Stalks will cook as asparagus.

Rainbow Chard

A five colour silver beet taking 50 to 60 days to mature. Tender to eat, this very ornamental variety has orange, yellow, pink, white, and red stalks. This variety that was nearly lost, was rediscovered, and is regaining popularity.

Bright Yellow

A yellow chard selection green leaves, yellow veins and stalks.

Orange Glow

Is an orange chard selection with orange veins and stems.

Green Griller F1

Golden Griller F1

SunDay F1 Goldline F1

Twinkle F1

Kermit F1

Courgette

Midi Type

Green Griller F1 S

Has a 38 day maturity, producing a dark green egg shaped courgette. It is easy to pick from its bushy low spined habit. Suited to barbecuing and grilling. [IR: ZYMV].

Grey Griller F1 S

Producing egg shaped grey green courgettes. It has a low bushy habit with a low spine count. [IR: ZYMV, Px].

Golden Griller F1 S

Has a 38 day maturity, producing egg-shaped, bright yellow courgettes, with a rich taste. [HR: SLCV].

Standard

Gambit F1

Is an early very productive 65 day bushy hybrid with dark green uniform cylindrical fruits, with a small flower scar. [HR: CMV].

Torino F1

A dark green, multi-virus resistant zucchini variety with excellent plant vigour and high yield potential. The medium size plants have an open habit, which allows easy access for harvesting. Producing very uniform dark green coloured fruits, with long shelf life. [HR: WMV, ZYMV and PRSV].

Syros F1

Has attractive shiny fruits and produces long stalks, for ease of picking. It produces uniform cylindrical fruits of a strong dark green colour. [IR: CMV, ZYMV, WMV, Gc.].

Poseidon F1

Is an early variety with a medium large plant habit, producing medium green, slightly striped cylindrical fruits. Ideal harvest size is 18 to 22 cm in length

Climbing

Black Forest F1

Attractive, dark green, smooth and cylindrical fruit. Grade-out to 14-16 cm long by 4-5 cm. Strong bushy climbing growth habit, suited to trellised indoor cultivation.

Yellow Type

SunDay F1

SunDay F1 has a bush habit with an open growth habit for ease of harvest. Fruits are round with a golden yellow colour.

Goldline F1

Producing attractive, straight golden-yellow fruits, with a sweet taste and a high content of Beta-Carotene. In cooler temperatures, a characteristic is that the plants young leaves have a distinct yellowing. Later in the season with warmer temperatures the leaves are dark green.

Romanesco Type

Latino F1

A romanesco type squash with a compact and erect plant habit. Fruit is cylindrical with pronounced ribbing, best harvested with the flower attached as it opens. Very productive with a good level of uniformity.

Scallop Type

Twinkle F1 S

Twinkle is a yellow scallop / patty pan hybrid with a dense growing habit, a large plant frame and long petioles. Uniformity is high, which leads to above average yields. This is one of the first scallop hybrids with a strong growing habit. [IR: ZYMV].

Kermit F1 🕞

Kermit is a new green hybrid scallop / patty pan with excellent fruit quality and very high yield potential. This mid-early variety gives uniform fruit that has a small blossom scar.

Polo F1 S

Polo F1 is an early maturing and productive summer squash. The plant habit is bushy and vigorous. The variety is capable of producing 1-1.5kg of 5-6 cm diameter scallop-shaped fruits, that are uniform, creamy white in colour and very tasty.

Jaune de vert

Is a French heirloom scallop/patty pan with scalloped fruit, cream-ivory skin with contrasting green radial streaking. It is a very flavoursome summer squash. If left to totally mature with a hard skin, it can also be oven baked.

Mashed Potatoes F1

Baked Potatoes F1

Casperita F1

Spark F1

Orangita F1

Greendisc F1

Is a high yielding green coloured scallop hybrid, suitable for harvesting as baby fruits with a light green colour, these can be eaten fresh, cooked or canned. When grown to full size the fruits are dark green.

Winter Squash

Butternut

Butternut Large

A blocky ended variety with a manageable vine. Fruits have a Mustard yellow coloured skin, with bright orange flesh. Typical fruit size would be 20 cm long and 12 cm in diameter. The fruits are ideal for roasting in halves or whole.

Dusk

A highly uniform, open pollinated variety, maturing a few days later than Butternut Large. Producing a very high yield of large blocky fruit, measuring 20-25 cm long by 10-12 cm in diameter and weighing 1.5-2.5kg, Dusk has a small seed cavity with distinctive dark orange flesh. [IR: PRSV, ZYMV].

Acorn Type

Mashed Potatoes F1

A bright white Acorn type variety. Its vigorous vines are highly productive bearing 3 to 4 fruits weighing between 450-700g per fruit. Flesh colour is nearly white, resembling mashed potatoes in both taste and appearance when baked and fluffed.

Baked Potatoes F1

Goldilocks F1

Bringing a whole new look and when baked has the flavour of baked potato. Its bushy plants produce an abundance of fruits with tan, butternut coloured skins and sweet off-white flesh. Each fruit weighing between 450-700g.

Goldilocks F1

Is a high yielding variety with a compact bush habit. Producing attractive, uniform bright orange 10 x 10 cm fruits with a rich nutty flavour. [IR: Px].

Midnight F1

Has a semi-bush habit, producing high marketable yields. It produces greed coloured disc shaped fruits with deep ribbing. The flesh is orange with a high sugar content. Fruit weight is 450 - 700a.

Harlequin F1

Has a compact bush habit, producing light green/dark green striped coloured fruits. Measuring approximately 13 cm in diameter and weighing 700 - 900g. They are edible or can be used for decoration. [HR: Gc].

Mini Type

Casperita F1

An attractive Italian heritage ghostly white pumpkin. The fruits have a classic pumpkin shape with deep ribs and a strong, green handle. It has sweet white flesh that eats similar to Acorn squash. [HR: Gc race 2, WMV].

Blaze F1

A hybrid pumpkin featuring yellow and deep orange stripes. The flat round shaped fruit average 17 cm in diameter by 9 cm high with an average weight of 1.36kg. The dark green handle is strongly attached to the fruit, making for an easy harvest. The plants are very vigorous. [HR: Gc].

Spark F1

A unique edible pumpkin with yellow and deep orange stripes. The handle is dark green and strongly attached to the fruit. Fruit uniformity is one of the variety's best qualities giving high yields of fruits that are 8 cm deep X 5 cm wide and weighing 226g. This ornamental is perfect for Halloween decoration. [IR: Px].

Buffv Ball F1

Mini winter squash with a vine habit. Fruit has a buttery colour rind and a rounded shape. Buffy Ball is a prolific producer and the fruits have excellent storage potential. Delicious baked whole in the oven.

Orangita F1 S

Mini pumpkin type with a semi-bush plant habit and maturing in 80 days. The fruits are disc shaped with deep ribbing and bright orange colouration, weighing in at 450-700g. [HR: Gc].

Jill Be Little

A mini pumpkin, producing dark orange skins, with deep sutures and weighing 254g. [HR: Gc].

Outdoor Cucurbits 25 Tel: +44-(0)1223 499130

Sienna F1

Orange Kabocha

Orange Queen F1

A vigorous hybrid giving a high yield of semi-globe shaped fruit of around 1.5kg weight. The firm skin is a deep orange and flesh is yellow to orange in colour with a very sweet flavour

Onion Type

Uchiki Kuri

Onion shaped squash with bright, orange skin and lovely, nutty flavour.

Crown Prince Type

Crown Prince F1

Producing flattened, greyish white fruits with smooth skins. The flesh is particularly tasty and sweet. Fruit weight is approximately 4-8kg.

White Pony F1

Mini Crown Prince type, slightly flattened with a greyish white rind. The fruit has a deep orange / yellow flesh which is very sweet, dry and nutty. The variety is relatively small in size, producing fruit weighing 1-1.5kg.

Spaghetti Type

Angel Hair F1

Personal size hybrid vegetable spaghetti weighing 450-900g. This 88 day type is yellow coloured and egg shaped with pasta type flesh and great flavour.

Halloween Pumpkin

Early Abundance F1

Is an early maturing handball-sized pumpkin bearing a lot of fruits on short stems, the 2 to 3kg fruits have a particularly smooth, light orange skin. Ideal for painting and carving.

Bentley F1 S

This variety has reduced vines which produce high yields of uniform 10-11kg fruit with firmly attached long handles and thick flesh. Fruit have slight to medium ribbing with classical orange rind. Independent tests confirm that it PMR can yield more tonnage than other popular hybrids. [HR: Px].

Challenger F1

The fruit has very nice, deep ribbing, a dark orange colour and a long and thick sturdy green handle. They produce an average of 2 x 10-12kg fruits per plant. [HR: Px].

Cougar F1

Combines the earliness of our pumpkin variety Neon and the patent pending PMR gene, that is found in our current commercial PMR series of pumpkins. Fruit is orange in colour, with nice ribbing and a sturdy dark green handle and weighing 5.5-6.5kg. [HR: Px].

Lumina 🕃

A white skinned pumpkin with thick orange flesh. The fruits weigh up to 5-6kg and have a diameter of 22 cm. They are perfect for painting and carving for your Halloween celebrations! The flesh of the Lumina pumpkin can be cooked and used in any traditional pumpkin recipe. [IR: Px].

Porcelaine Doll F1

A very eye-catching pink skinned pumpkin, with deep orange flesh. The fruit has deep ribbing with an almost square appearance. The deep orange flesh has an excellent sweet taste, making it ideal for pies and soups. [HR: Pcu. IR: Px].

Early King

An early maturing, very large Pumpkin, producing fruits weighing between 9-13kg, with a deep orange colour. [IR: Px].

Darling F1

A semi bush variety producing dark orange pumpkins, 30 cm tall x 20 cm diameter weighing 2.7kg to 3.7kg

Bayhorse Gold F1

A uniform, slightly upright hybrid with striking very dark orange fruit and elongated dark handle. [HR: Px].

Sienna F1

Is an edible or novelty variety with a semi bush plant habit with the PMR gene. It is high yielding, producing orange 0.9 to 1.4kg fruits, that are oval shaped with moderate ribbing. [HR: Gc, Dcu].

Sweetcorn

Inferno F1 S

One of the newer yellow synergistic SE types, which has been bred to be harvested in early mid-season. Cobs are blunt ended and 20 cm long, with between 14-18 rows of deep golden yellow kernels that are well wrapped. [IR: NCLB, R, SW].

Café F1

A 68-day yellow synergistic SE hybrid. It is the yellow version of Latte F1 and offers all the same great flavour, cold soil performance, and plant characteristics. Cobs are 19-20 cm long and filled to the tip with sweet yellow kernels.

Latte F1

A 68-day bi-coloured synergistic SE hybrid with outstanding quality in the early class. Plants are dark green with high yield potential producing 19-21 cm long cobs, with a great tip fill. Latte F1 offers good cold soil performance with sweetness, tenderness and good flavour.

Illusion F1

Moonshine F1 S

The plants are tall and strong producing attractive cobs with good tip cover and very little shank. Producing high yields of 20 cm cobs with between 14-18 rows of deep full kernels with high sugars. Moonshine F1 has outstanding cold soil emergence. [IR Ht, RP1D Rust, IR Stewarts].

Illusion F1

An early 72-day synergistic variety, with dark green coloured foliage and amazing flag leaves. It produces 4.5 cm long cobs with 19-20 rows of white kernels and a strong tip fill. [HR: CR, STW].

GSS3071 F1

Strong variety with long cob and excellent kernel colour and flavour for consumer appeal. Widely adapted for a variety of growing conditions. [HR: Pst, Bm, Ps, MDMV. IR: Et].

Picasso F1

A 74-day synergistic bicolour variety, naturally selected for its unique purple coloured stems and husks. Cobs are 20 cm with 16-18 rows of kernels.

6800YR F1

The early segment standard for many years.

3778 F1

An important variety for main cropping. With SSW technology it produces a strong and uniform plant with good yield and cob presentation.

Prime Plus F1

Is a late season 78 days (909 AHU) yellow super sweet of outstanding quality. Producing 20 cm long cobs, with14-16 rows of kernels. [HR: Et/ Ps (Rp1-d); IR: Pst].

Elan F1

Is one of the earliest ripening sweetcorn hybrids worldwide. Producing 18 – 20 cm long cobs, weighing 220 – 300g. Elan F1 is well adapted, for growing in open fields and forcing in tunnels. [HR: Kabatiella zeae. IR: Bm, Ps.].

Mini Plum Lizziebell F1

Lizziebell is an early fruiting indeterminate variety with a vigorous growth habit. Fruit is 16-17g in weight and an orange oblong shape. [IR: F1, TMV].

Luciebell F1

Luciebell is an early fruiting indeterminate variety with a vigorous growth habit. Fruit is 16-17g in weight and red oblong in shape. Along with Lizziebell, Katiebell and Flamingo an attractive four colour Rainbow Mix can be created. [IR: F1].

Katiebell F1

Katiebell is a vigorous mini plum type producing high yields of attractive and tasty yellow oblong fruits of 16-17g in weight. [IR: F1, N].

Flamingo F1

Flamingo is a single pick, pink mini plum type with good taste and flavour, with 9-10% Brix. This new, heavy yielding variety has 19-22g fruits, similar in shape to 'Santa'.

Pink Jester F1 S

An indeterminate hybrid plum variety with medium sized fruit weighing 15-25g. Fruits have excellent flavour and an attractive pink colour.

Artisan Green Tiger S

Is an indeterminate variety, with light green striped 18-20g mini plum fruits with darker green stripes.

Artisan Pink Tiger 😂

Is an indeterminate variety, with pink striped 18-20g mini plum fruits with golden yellow stripes.

Artisan Blush Tiger S

Is an indeterminate variety, with yellow coloured fruits 18-20g mini plum with a pink blush stripe.

Bronze Torch F1

Producing high yields of large, oblong shaped fruits, 3 cm x 6 cm and weighing 28g in weight. Fruits are brick-red coloured bronze striping, averaging 8.0% Brix.

Red Torch F1

An early indeterminate variety, producing oblong shaped fruits, coloured red with a yellow stripe. Fruits are 5 cm long and are approximately 40g, with an average of 7.0% Brix.

Midi Plum

Orange Beauty F1 S

An indeterminate orange coloured midi-plum. Producing trusses of 20 to 24 fruits each weighing 25-28g. Excellent sweet taste, with an average 10.6-11.6% Brix in our trials. Ideal for the home garden market. [HR: ToMV, Fol 1+2].

Plum

Indigo Kumquat F1 S

A semi-indeterminate variety, with tangerine orange plum shaped 35g fruit with indigo pigmentation on the shoulders.

Indigo Ruby F1 S

A semi-determinate variety, with red plum shaped 50g fruit, suited to both indoor and outdoor cultivation.

Pear

Indigo Pear Drops S

Producing yellow pear shaped fruit with purple black shoulders.

Chocolate Pear

Fruits are light red mini plum shaped overlaid with swirls of green or brown.

Cherry

Sparky F1 Ab

Is an early maturing, high yielding variety. This striped red cherry variety is heterozygous for the 'rin' gene, so it has good keeping qualities and exceptional flavour. Averaging 8.5% Brix

Orange Paruche F1

An extra early. Fruit has a very nice appearance with a round shape and orange colour. Weighs 15g and has a high vitamin content also with a high sugar content of 8-9% Brix. [IR: F1, TMV].

Indigo Cherry Drops

Sweet Success F1

Arielle F1

Chocolate Cherry

Rondino F1

Artisan Golden Bumble Bee 😒

Producing golden yellow 15g cherry fruits with orange stripes.

Artisan Pink Bumble Bee S

Producing pink 15g cherry fruits with golden yellow stripes.

Artisan Purple Bumble Bee S

Producing dark maroon 15g cherry fruits with green stripes.

Indigo Blue Berries S

Producing amethyst purple 15g cherry fruits, ripening to almost black with a brick red bottom.

Indigo Cherry Drops S

Producing 15g purple black cocktail cherry fruits with a rosy under side.

Moncherry F1

Indeterminate, mini cherry variety with 7.5-8g fruits with 8-9% Brix and a well-balanced taste and flavour profile. Moncherry is aimed at the home garden market where it can replace Piccolo in this segment. [HR: F1, F2, TMV].

Yellow Mimi F1

Indeterminate, high yielding bright yellow cherry sized 15g sweet and crunchy fruits, 9-11% Brix. Tolerant to fruit cracking. Best yellow fruited tomato there is for taste and texture, which can be hard to achieve with yellow tomatoes. [HR: Fol, TMV].

Ruby Beauty F1 S

A unique indeterminate cherry tomato, producing 14-16 fruits per truss with a bright, glossy, ruby red colour. Fruits are 13 mm diameter, weighing 15-20g. [HR: ToMV, Va, Ma. IR: SI].

Sweet Success F1

An easy-growing, free-setting cherry tomato. The plants produce masses of bite-sized, richly coloured fruits. These fruits also keep well over a long period after harvest. Fruit weight is 15-22g with an average 6-8% Brix. [HR: V, Fol, TMV, N].

Cocktail

Greenkiwi F1 S

Is a highly productive single pick hybrid, with long trusses of attractive 18-20g green coloured fruits with an average 10-11% Brix. [HR:TMV, Pf].

Chocolate Cherry

An extremely flavoursome and uniform cherry tomato with round red / brown fruits which are borne in trusses of 6-8 fruits. A heavy producer with skin cracking tolerance. The fruits measure 2.5 cm in diameter with 60-65 fruits per kg.

Arielle F1

A very strong plant with short internodes. Fruits are 10-15g with a dark red colour, they have a very good flavour either when it is picked fresh, dried on the plant or after picking. See the Genetic Trait chart in Appendix 1 on page 50. [HR: N. + IR: F1+2, TMV, V].

Gardeners Delight

An old standard, but still very popular cherry tomato variety with small fruits with very sweet flavour.

Roma

Isabel F1

Large Roma plum shaped fresh market type with uniform high yields of cylindrical shaped fruits with good flavour. Trusses of 16-18 very uniform fruits, each weighing approximately 90-120g. [Va, TMV].

Sweet Casaday S

Is a red and yellow striped novelty Roma type tomato with 30-35g elongated, attractive slim shaped fruits, suited for fresh eating and tomato paste production.

Classic

Tasha F1

Indeterminate variety, large trusses of round tomatos, with 4-5 fruits, weighing 180-220g. Excellent colour, taste and long shelf life. [HR: F1, F2, V, TMV, TYLCV, N].

Rondino F1 🕝

A new indeterminate tomato variety, with both the PH2 + PH3 genes. Exclusively bred by Pro-Veg Seeds Ltd for outdoor cultivation. Producing uniform 8 to10 round red classic fruits per truss. Fruit measure 55 mm x 55 mm and weigh approximately 120g-150g, with a 5.5% Brix. The harvested fruits have a good shelf life and storage capability.

Red Bodyguard

Y Ddraig Goch (Red Dragon)

Indigo Rose

Maisey

Summer Cocktail F1

Cherokee Purple F1

This variety is at least 100 years old and was reported as originally grown by Cherokee Indians. A very productive variety, with enormous 350g fruits of a pink colour turning to purple on the shoulders, with a particularly sweet and complex flavour.

Glacier S

Brandywine S

An heirloom indeterminate, large pink beef tomato variety. It requires good cage or staking and is not uncommon for one plant to produce 25-30 fruits each weighing approximately 350-400a.

Red Bodyguard S

A UK bred variety, which was developed specifically with eating quality and disease resistance in mind. It is an indeterminate large classic variety, developed for indoor and outdoor culture. Plants produce fleshy and tasty fruits weighing approximately 120g with 6% Brix. [HR: Fol (0, 1) Vd (O) IR: Pi].

Y Ddraig Goch (Red Dragon)

A plant height of 1.5m with 5-6 trusses per plant and approximately eight 70g fruit per truss. It has long standing ability, a perfect variety for a cold greenhouse or poly-tunnel. It has good flavour with outstanding quality rich red tomatoes with a large calyx. [HR: Fol (1), Vd (0), ToMV].

Pannovv S

A vigorous and well proven variety, suitable for use in soil or in substrate. Very high quality 75-85g uniform fruits with bright red colour, round shape and excellent flavour. [HR: ToMV (0-2), Va, Vd, Fol (1+2), Pf (1-5), Si].

Large Round and Beef

Indigo Apple S

This indeterminate variety matures in 70 days from transplanting. The fruit start off purple, but will be virtually black when ripe, and high in antioxidants.

Indigo Blue Beauty 😂

This variety produces meaty 100 to 200g beefsteak fruit which are sweet and aromatic, they are tolerant to sunburn and cracking.

Indigo Rose 😂

A semi determinate variety producing 50g fruit with a colour that starts as a shiny blue-purple before turning to dull purple brown when ripe. [HR: As].

Rozet F1

An indeterminate beef sized tomato which has been bred for growing in either greenhouses or in polytunnels. Trusses bear 4-5 fruits, each fruit is 8 cm round in shape and weighs between 190-300g, with an average 5-6 Brix. [HR: TMV, Ma, Va, Fol].

Maisev S

An indeterminate small beef tomato with slightly flattened fruits weighing approximately 60 grams. It combines an impressively good flavour with outstanding quality rich red tomatoes with a medium large calyx. [HR: Fol (1), Vd (0), ToMV].

Tomato - Outdoor Semi-Determinate Summer Cocktail F1 S

This variety produces long trusses of 35g red cocktail sized fruit with excellent flavour. [HR: F1+2. + IR: As].

Summer Classic F1 S

Is a beefsteak type with good vigour, producing uniform round shape, 170-230g red fruit with good storage capability. [HR: As].

Summer Grape F1 S

Plants have a vigorous plant habit, producing early red plum shaped, 18-23g fruits with excellent flavour. [HR: As].

Bush

Koralik

Koralik is an early bush variety with noticeably healthy growth. It consistently produces a surprisingly high yield. Koralik has an appealing bright red colour and an excellent sweet flavour. This semi-determinate cherry type has shown tolerance to late blight in our trials.

Celano F1

Romello F1

Lizzano F1 Losetto F1

Orangeto F1

Solito F1

PVSL Patio Range

Celano F1

Our latest introduction in the Patio range, this variety is a grape type, with a vigorous bushy habit. Producing high yields of grape size fruits, with a high 9.6% Brix. It performs best when grown with some support, such as an American style tomato cage. It has also performed very well when grown on a table top system. [HR: Pi].

Romello is the first determinate mini plum hybrid bred especially for patio growing. High 10-12% Brix has been recorded with this variety when grown in a large container. [HR: Pi].

Lizzano F1

Vigorous semi-determinate plants produce cherry size fruits of 11g measuring 25 mm x 25 mm with 7-8 % Brix. Plant height: 40-50 cm tall, with a 50 cm spread. This variety has a trailing growth habit which works well in a hanging basket. [IR: Pi].

Losetto F1

Losetto F1 is a semi-determinate variety producing a lot of flowers with a good fruit set. The mini cherry sized fruits have an average weight of 16g and a size of 28 mm x 26 mm with a Brix of 7-8 %. Plant height: 60-70 cm x 50 cm spread. [IR: Pi].

Bitonto F1

Bitonto has compact foliage, rugose leaf habit and a lot of fruits. It has a very compact plant habit and is bred for pot production. The cherry shaped glossy fruits have an average weight of 12g measuring 25 mm x 28 mm. Brix is 7-8 %.

Terenzo F1

Terenzo F1 is an improved cherry Tumbler type producing a lot of flowers with an approximate fruit size of 30 mm x 33 mm. The round fruit has an average weight of 19g and a Brix of 6-7%.

Siderno F1

Siderno has a vigorous bushy habit and cocktail sized fruits with an average weight of 23-24g. The Brix is 6-7% and size 30 mm x 36 mm. Fruit is almost round with a light green shoulder.

Montello F1

Montello F1 is a medium sized Roma type plum shaped tomato with a vigorous bushy habit, best grown with some support. It can be grown in a large patio pot. Fruits are 25-45g in weight with a fruit size of 40 mm x 35 mm and have an average 6-7% Brix. [IR: Pi].

Orangeto F1 (2)

A unique new semi-determinate tomato variety, with the PH3 gene. Exclusively bred by Pro-Veg Seeds Ltd in the United Kingdom. Its orange coloured fruits are cherry sized, weighing 35-45g, with good flavour, averaging 10% to 13% Brix. [HR: ToMV IR: Pi].

Solito F1

A unique new semi-determinate tomato variety with both the PH2 + PH3 gene. Exclusively bred by Pro-Veg Seeds Ltd in the United Kingdom. Its orange coloured fruits, are cocktail sized. weighing 35-45g. Producing high yields of very tasty fruits, averaging 10-11% Brix. [HR: F1 + 2, Pi, V. IR: A].

Capsicum

Sweet-Long

Thor F1

Sweet accumulation type with tall, vigorous, main crop plant. Fruit is narrow triangular up to 28-30 cm long; dark green to bright red at maturity. Wall thickness 6-7 mm.

Astor F1 😂

An accumulation type with a tall and vigorous plant and medium late maturity. Sweet fruit is long, up to 28-30 cm, and a narrow triangular shape with walls 6-7 mm thick. Dark green to bright yellow at maturity.

Sweet-Blocky

Saskia F1

Sweet pepper, apple green to deep red at maturity. Four lobed blocky type. Suited to indoor or outdoor production. Good producer with cracking tolerance.

Gelby F1

With a vigorous medium sized plant habit. It is well suited to all forms of protected cropping. Producing a large number of bright creamy-white to yellow sweet fruits over a long period. These fruits are 6-8 cm long and 3-4 cm wide, with an approximate weight of 10g.

Oregon F1

Suitable for growing either outdoors or under protection. It produces 300-350g fruit, with a blocky shape and approximately 15 cm long. At maturity it is a very attractive deep orange colour.

Purple Beauty Bell S

Is a bell pepper that holds its dark purple colour for a long time, but the flesh maintains the standard green pepper color. Crisp texture and mildly sweet in flavor.

Sweet - Mini-Blocky Sweetonia Red PS

Is a very sweet, tasty snack pepper which is suitable for both indoor and outdoor production, the fruit ripens from green to red and are 30-40g in weight. The plants have a mid-late maturity and a medium vigour.

Sweetonia Orange THS

Is a sweet, tasty snack pepper which is suitable for both indoor and outdoor production, the fruit ripens from green to orange and are 30-40g in weight. The plants have a mid-late maturity and a medium vigour.

Sweetonia Chocolate S

Is a very sweet, tasty snack pepper which is suitable for both indoor and outdoor production, the fruit ripens from green to chocolate and are 35-45g in weight. The plants have a midlate maturity and a medium vigour.

Habanada

Bred by Dr. Michael Mazourek of Cornell University, Habanada is a new extremely productive and early heatless 'habanero' type, with an irresistible tropical flavour. It can be used for chopping at the immature green stage, but they are best eaten when they turn fully orange. Fruits are excellent when seared, braised, roasted or eaten raw.

Hamik

A very tasty snack pepper suitable for both indoor and outdoor production. The variety has mid late maturity and medium vigour. The 30-40g fruits are very sweet and almost seedless. We recommend harvesting this variety when fully orange for maximum appeal.

Sweet - Tomato PeppersGogorez F1

Is an indeterminate tomato-shaped pepper hybrid, with hanging, large fruits. The fruit have thick walls and are approximately 4-6 cm long and 9-12 cm wide, with fruit weights of up to 300g.

Tamina F1

Is an early hybrid tomato-type pepper. This variety produces an attractive tomato-shaped fruit, weighing approximately 100g. It matures from green to a dark red colour.

CSM029

Has bright green leaves that are juicy and tender. If allowed to mature and bolt, yellow flowers will shoot from the plant and it becomes more sweeter and succulent. The whole plant is edible.

Wild Rocket

Captiva

An early maturing variety with an upright growth with dark green serrated leaves. Good strong characteristic 'Rucola' (Rocket) taste. [HR: Hp].

Wasabi

A cheaper substitute to the Japanese 'Wasabi Root' offering a similar flavour. This vigorous baby-leaf variety has leaves that are deep green colour and have a strong texture.

Parsley

Curled leaf type

Marunka

Mooskrause type variety of curly leafed parsley for indoor and outdoor production for either pot, fresh and dried.

Flat leaf type

Festival 68

For use in the fresh market and the dried processing market. Festival 68 is a vigorous early maturing variety. [HR: Pp, Sp]

Okra

Red

Red Burgundy

Maturing in 90-100 days from planting, Red Burgundy produces red pods with good flavour. Plant height 1 to 1.5m.

Carmine Splendor F1

Is a red, high-vielding, uniform variety. Pods are 5-pointed and are deep red coloured when small, fading to a lighter red/pink when larger. Maturity is mid to late summer harvest season. The variety is fast maturing, with stalky, upright plants and attractive, pink-tinted, edible flowers.

Green

Greeny Splendor F1

Is a vigorous variety producing tender green pods that are up to 14 cm in length.

Physalis

Little Lanterns (Physalis peruviana)

Has a 30 cm, compact growth habit flowering in July-August.

Preciosa (*Physalis pruinosa*)

Is much sweeter than other Physalis varieties. Preciosa is extremely early and a very productive variety. Ideal for the balcony, containers and hanging baskets.

Appendix 1 - Raisin Tomato

The Genetic Trait

Natural dehydration of Raisin Tomato vs. Traditional 'Cherry' Tomato at room temperature over a period of 11 days.

Copyright @Nutrition Capital Network

Arielle F1

Fruits can be picked as a cluster and hung in an aerated, dry place, room temperature is sufficient, but if housed in a closed room with a heating facility, the drying process will be faster. They can also be dried in perforated (incl. bottom) boxes in one layer per box. If half of the harvest is to be dried, it is recommended that the fruits be stored in oil, preferably olive oil. Adding additional herbs such as basil will improve the taste. If the total crop is to be dried, the fruits should be stored in an aerated place to avoid any mold developing.

50 Production Guide PRO-VEG SEEDS CATALOGUE 2022 / 23

Tel: +44-(0)1223 499130 Conditions of Sale 51

Conditions of Sale

- **1a.** The expression 'the company', 'we', 'us', 'ourselves', refer to PRO-VEG SEEDS LTD. by its servants or agents.
- **1b.** The expression 'the purchasers' refer to the persons, firms or companies contracting with the company for the purchase of its products.

2. GENERAL

This offer is subject to crop, to safe arrival, to being unsold, to alteration without notice and to the general terms of our catalogue. Seeds sold by the company (which are the subject of this contract) are warranted to comply at the time of delivery with the UK and EU Seeds Regulations currently in force. All vegetable seeds are 'standard' seeds unless otherwise stated. All information whether contained in our catalogue or given by our staff and related to varieties, varietal characteristics or periods of maturity or fitness for any particular purpose or otherwise relating to the performance of seeds is given for general guidance only. (Variation in local or climatic conditions can render such information inaccurate). Purchasers are therefore advised that any such information given to them does not constitute a representation by the company as to these matters and should not be relied on as such. Purchasers should satisfy themselves that any seeds which they order are of a variety and performance satisfactory for their requirements and order such seeds at their own risk

3. LATENT DEFECT

Diseases of plants can be transmitted by the wind, by insects, by animals, or by human agencies and may be seed borne or soil borne. The company believes the seed hereby sold to be free from latent defect but it is not a condition of sale nor does the company warrant that

- any seed sold by it is free from such defect nor will it be responsible in any way for the resultant crop.
- **4.** The company reserves the right to refuse the return of seeds. It also reserves the right to make a charge against any such returns. All seed returns must be in unopened original packaging.
- 5. In the event of any seeds supplied not complying with the terms of contract of sale or of any seed proving defective, (whether as regards purity or germination or otherwise) the company will at its option replace the seeds free of charge to the purchaser or will refund all payments made to us by the purchaser in respect of the defective seeds and this will be the limit and the sole extent of the company's obligation. All liability whatsoever is excluded for any loss, expense or damage whether direct or consequential arising in any way whatsoever in connection with any seeds supplied by the company whether due to any failure in the performance of or any defect in any such seeds or otherwise howsoever save for the liability for such replacement or refund as aforesaid. In accordance with the established custom of the Seed Trade any express or implied condition, statement or warranty statutory or otherwise whatsoever not expressly stated in these Terms of Business is excluded. The price of all seeds offered for sale is based upon the foregoing limitations upon the company's liability and would be greater if a more extensive liability were required to be undertaken by us.

6. GENETICALLY MODIFIED ORGANISMS (GMO)

We are not offering for sale or trialing any genetically modified material.

7. TECHNICAL DISCLAIMER.

This Pro-Veg Seeds Ltd seed catalogue has been produced with the utmost care. How-ever Pro-Veg Seeds Ltd and /or its' representatives give no guarantee that the

information provided, including, but not limited to, variety descriptions and technical advice, is complete and accurate and suitable for all purposes the user may choose. The technical data and recommendations in this catalogue are based on Pro-Veg Seeds Ltd trials and our general experience and is essentially based on Northwest European circumstances.

All the information supplied is to assist professional growers and users, who should always take into account their local situations and conditions.

These recommendations do not provide a guarantee of a successful crop. Pro-Veg Seeds Ltd, therefore, accepts no responsibility or liability for any damage or loss of profits resulting from the use of this catalogue.

8. CARRIAGE CHARGES

All seeds are offered carriage paid home within Great Britain. For all international destinations the carriage will be charged to the buyer. The company reserves the right to determine means of delivery. Should urgent delivery be requested the difference between normal and this 'urgent' method is chargeable to the purchaser. This will also be the case for consignments of valuable seeds. Notwithstanding the above, total carriage charges on all orders of less than £30 will be for the purchaser's account.

9. PAYMENT

Terms are cash with order, except for customers with priorapproved accounts who have a satisfactory credit-check reference. Approved accounts are those where satisfactory business or banker's references have been supplied. Unless otherwise specifically agreed all such accounts are due be paid by a single payment which shall be made 28 days from the date of invoice.

Unpaid accounts will be subject to interest charged at the

rate of 2% per calendar month over the UK Bank Rate as set by the Bank of England. The goods remain the property of the company until paid for in full and until such time the purchaser shall hold the goods as the bailee of the company.

10. FORCE MAJEURE

The company shall not be responsible for delay in delivery of the goods or any part thereof occasioned by any Act of God action, by any government, strike, lockout, combination of workmen, riot or civil commotion, breakdown of machinery, power failure, fire, failure of crops grown by us or on our behalf, less and / or detention of sea or any other contingency beyond our control. Should any of the goods be rendered unfit for delivery by reason of any of the above acts, the contract as far as it relates to those goods shall be deemed to be discharged.

11. DAMAGE, DELAY OR LOSS IN TRANSIT

If goods are damaged in transit it is essential that the delivery sheets be signed 'damaged in transit'. No claim for damage can be entertained unless made in writing within three days of delivery of goods, both to the carriers and the company. In case of non-delivery of any package both the carriers and company must be notified within fourteen days of despatch, and the claim be made in writing within twenty eight days from the time of despatch.

12. All seeds are offered and sold for the production of consumer crops and not for the reproduction of seed. No responsibility whatsoever can be accepted for the growers' outcome regarding any seed crops produced. All sales are made on the express understanding that the purchaser undertakes not to pellet or to have pelleted the seeds supplied by the company.

13. COMPLAINTS

No complaint under the terms of these conditions of sale can be considered unless clear proof can be given that the seed grown and alleged to have performed unsatisfactorily was in fact the seed supplied by the company and that it was stored correctly, sown on suitably prepared ground, treated carefully and correctly throughout and subject only to such conditions as were likely to produce a favourable crop.

14. ARBITRATION

Any dispute under this contract shall be referred to arbitration in accordance with the arbitration rules of the British Society of Plant Breeders Ltd, current at the date of referral, which have been drawn up in consultation with and approved by the National Farmers' Union of England and Wales, the National Farmers' Union of Scotland and the Ulster Farmers' Union. All parties shall in making this contract be deemed to have knowledge of such rules and to have elected to be bound thereby.

Copies of arbitration rules can be obtained from the British Society of Plant Breeders Ltd, BSPB House, 114 Lancaster Way Business Park, Ely, Cambridgeshire, CB6 3NX.
